

BMP-3 Safety Box

The Best Management Practice-3 describes rules, tips and to do's in case of a pirate boarding attempt. In order to protect a ship's crew from getting any injuries during these events there is the need for personal protection items.

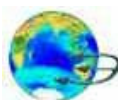

Our vast experience in this field has enabled us to produce the BMP3 Safety Box designed to protect the crew under those difficult and dangerous circumstances. As well as personal items, such as body armor, helmets, visors and gloves, the BMP3 Safety box also contains items for less personal use such as a GPS locator and a handheld Thermal imaging system.

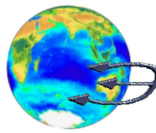

The box is delivered for immediate use in a well designed protective fitting and includes detailed instructions of use. No further training is required.
